

PRAJWAL T.S

AI Application Developer | Machine Learning & Generative AI Engineer

Virajpet, Kodagu, Karnataka, India | +91 94826 12382 | prajwalts093@gmail.com

GitHub: <https://github.com/wwwshivadas053source> | LinkedIn: <https://www.linkedin.com/in/prajwal-t-s-354a57359>

TECHNICAL SKILLS

Languages

- Python, JavaScript
- SQL, HTML5, CSS3

AI / ML

- Google Gemini API
- TensorFlow, Keras
- Scikit-learn, NumPy, Pandas
- OpenCV, Grad-CAM
- RAG, FAISS
- Prompt Engineering

Web & Data

- Flask,
- Flask-Login, SQLAlchemy
- Bootstrap, Tailwind CSS
- SQLite

Tools & AI-Assisted Dev

- GitHub, Render, VS Code, Pycharm
- Copilot, Claude, ChatGPT, Gemini, Antigravity

EDUCATION

Bachelor of Computer Applications (BCA)

St. Anne's Degree College, Virajpet,
Kodagu University
2023 – 2026

CERTIFICATIONS

- Machine Learning with AI — Internshala (2026), 96% — Top Performer
- Data Science with AI — Internshala (2025), 78%
- Web Development — Internshala (2025)
- Tata Crucible Campus Quiz — Prelims Level 1
- ISP Program — Direct Entry

PROFESSIONAL SUMMARY

Fresher (final-year BCA student, graduating 2026) seeking an entry-level role as an AI Application Developer, ML Engineer, GenAI Developer, or Prompt Engineer. Independently built 7 full-stack AI projects integrating Google Gemini, TensorFlow/Keras, RAG pipelines, and Scikit-learn. Skilled in Flask backends, ML/DL model training, and front-end development, with daily use of AI coding tools (Copilot, Claude, ChatGPT, Gemini) for rapid, AI-assisted development. Top performer (96%) in Internshala's Machine Learning with AI certification.

KEY PROJECTS

College Notes RAG Chatbot — AI Study Assistant (RAG Architecture) 2026

Python | Flask | Google Gemini API | FAISS | PyMuPDF | PostgreSQL/SQLite

- Built a Retrieval-Augmented Generation (RAG) system enabling students to upload PDF notes and receive context-aware answers from Gemini AI, using PyMuPDF chunking and Gemini embeddings indexed in FAISS, with TF-IDF fallback.
- Implemented per-user document isolation, role-based admin dashboards, and Flask-Login authentication; designed to scale from SQLite to PostgreSQL on Render.

MedVisionAI — AI Skin Disease Detection System (Deep Learning) 2026

Python | Flask | TensorFlow/Keras | OpenCV | Grad-CAM | SQLite

- Built a deep learning CNN with TensorFlow/Keras to classify skin diseases from images with confidence scoring and Grad-CAM explainable-AI heatmaps highlighting affected regions.
- Added automated PDF medical reports, prediction history tracking, user authentication, and an admin panel.

Other Projects

- AI Resume Analyzer (Flask, Gemini API, PyPDF2) — ATS scoring, job-description matching, and AI-powered resume rewriting.
- AI Crop Advisor Chatbot (Flask, Gemini API) — multilingual farming chatbot with weather API integration.
- Crop Yield Prediction & Recommendation System (Flask, Scikit-learn, Gemini API) — regression model paired with AI-generated farming recommendations.
- Property Price Prediction System (Flask, Scikit-learn, SQLite) — ML regression model with automated PDF reports and an admin dashboard.
- Student Accommodation Management System (Flask, SQLite) — full-stack platform for listing, searching, and managing student housing.
